week-7-lesson-1

task-1 (to practice char arrays)

A user enters a text of size up to 50 symbols and the program saves it into a char array and then prints it. The user may print something less than 50 symbols and press the enter (return) button. The program saves and prints the text until 50 characters.

task-2

Declare a struct for a book and fill in with data about the book we are learning.

task-3

Use a struct for a book from task-2 to declare an array of structs and fill other array elements.
Declare a struct for a course. Use the book array as a resource field of the struct course.

task-4

Prepare data for this lesson (Tuesday) in structure and print it out. Include section, main resources: web-site and book, lecture room, schedule, length of the lesson.
